News Release

FOR IMMEDIATE RELEASE

interLink MessageExchange

LAS VEGAS, NEVADA, May 18, 2004--- Software Corporation International (SCI) announced today that it has added MessageExchange capabilities to its interLink platform. interLink is SCI's robust platform designed to facilitate information exchange between applications residing across the same or differing platforms.

The interlink MessageExchange provides interactive communications for applications on a Windows or OS390 platform to communicate with another application residing on either the same or opposite platform. Control of the communications and the actual content of the communications are solely up to the interfacing applications. The role of the interlink MessageExchange is to allow custom messages to be transferred from one interfacing application to another.

"There is an increasing demand in today's environment that solutions operate on and communicate across platforms. Applications must be able to communicate in a batch/file based mode as well as a real-time/interactive mode. Solutions that take advantage of the strengths and information available across platforms will be those that succeed," commented Tony McCann, Chief Information Officer.

SCI will be demonstrating interLink along with their other solutions in Las Vegas May 18th and 19th at this year's BAI TransPay 2004 Conference. For additional information on interLink or other SCI solutions and services, please contact SCI's Software Development Group at (800) 772-7044.

SCI is one of the world's largest providers of CPCS and imageCPCS expertise. Since 1990, the company has been providing professional services and technical solutions to clients in the financial services industry. Additional information about SCI and its solutions can be found on the web at www.sci-solutions.com.
