FOR IMMEDIATE RELEASE

SCI Announces **interLink** Agreement

Las Vegas, Nevada, May 22, 2006--- Software Corporation International (SCI) announced today that CONIX has signed an agreement to use their **interLink** software as the communications framework in the new *i*CONIX platform. *i*CONIX is a scalable, server-based, open-image processing architecture that enables rapid, efficient development of multiple processing applications. SCI's **interLink** is a robust middleware application that is designed to facilitate the integration of host and server applications by providing a facility to distribute and consolidate information, including text, data, reports, and images.

Frank Stokes, President, CONIX Technology Group, said "**interLink** provides a very powerful and flexible communication layer between the host and server, independent of the capture platform used." D. Keith Sides, Group Vice President, SCI, adds, "Organizations of all sizes are discovering that they can maximize their effectiveness and respond to marketplace requirements like Check 21 by incorporating middleware applications like **interLink** into their solution offerings."

SCI will be demonstrating **interLink** in Las Vegas May 22nd and 23rd at this year's BAI TransPay 2006 Conference.

About SCI

Software Corporation International (SCI) is one of the world's largest and most experienced providers of CPCS and **image**CPCS expertise and solutions to the financial industry. Since 1990, the company has been providing professional services and technical solutions to clients in the financial services industry. Since 2000, SCI's software development group has been focused on developing both host and server based applications for the payments marketplace. Incorporated in 1990, the company is headquartered in Toledo, Ohio, and has offices in Buffalo, New York, Charlotte, North Carolina, and West Palm Beach, Florida.
