VUIT

VUIT

Overview

SCI's VUIT utility was designed to allow users to locate string data within CPCS, make changes to the data if desired, and write the strings back to CPCS. VUIT displays the CPCS data broken down into fields and allows searches to be performed either throughout the data or by field. Changes can be made quickly within the CPCS session.

All-in-One Repair Tool

VUIT is more convenient and accurate than other string utilities because it allows the string research and modifications to be performed in one step within CPCS. TSO editing is not required. Changes can be made directly to the data that has been located.

Production Support

When a problem exists with data on a CPCS string, VUIT will assist programmers in supporting production problems quickly and accurately. VUIT will make it possible to find the problem easily and fix it quickly.

Testing Aid

VUIT can be used to modify string data easily in a CPCS test region to provide the necessary input to create testing scenarios. This will increase the efficiency of problem resolution and expand the testing capabilities of current CPCS users.

Flexibility

Because VUIT deletes and then rewrites strings in CPCS, the recovery task (RCVY) can be used to recover a string to correct errors.

Documentation and Help

VUIT, like all SCI applications is delivered with a comprehensive set of documentation. Specific VUIT documentation topics include Profile Member, Programs, VUIT Processing, Browsing Data, Updating Data, Deleting Data, Repeating Data, and Help Screens.

VUIT also includes Help screens that display information to help users complete the fields on the screen (for example, valid command values and the parameters needed for the commands).

SCI

SCI was founded in 1990 by a group of individuals with extensive experience in the payment systems and professional services industries. During the last decade, the company has grown to be one of the world's largest and most capable independent providers of CPCS technical support. SCI consultants are some of the most talented and experienced professionals in the marketplace. They possess the understanding and insight necessary for quickly solving our client's most complex challenges.

Today, while SCI remains focused on its initial market, the company has significantly increased its professional services and solutions offerings. SCI's software development group was formed to leverage the company's knowledge and expertise to deliver a suite of niche based applications all designed to increase the power and flexibility of IBM's CPCS.

VUIT is an excellent example of SCI's focus in software development. The company's goal is to provide tools, utilities, and applications that all deliver real value and provide immediate benefits.

For more information about VUIT or other SCI solutions, please contact the company's software development group at 800-772-7044.
