### **SCI VUIT Utility – CPCS Enhancement**

Charlotte, N.C., February 8, 2002---- Software Corporation International (SCI) announced today the release of SCI's String Viewer Utility (VUIT). This application provides current users of IBM's CPCS the opportunity, from a CPCS session, to: view string data in hex format broken up into fields; search the data for particular values; and edit the data by adding, changing, or deleting records. This product will increase the efficiency and flexibility of problem solving and can be used as a valuable tool in testing.

The SCI VUIT utility provides users and CPCS technicians with the ability to correct or research string data quickly, all within online CPCS. By taking advantage of this online CPCS utility, users can dramatically decrease the time required to locate and solve string data problems. "The SCI VUIT utility is another example of SCI's software development efforts," said Russell Pokorny, Technical Services Manager. "SCI is committed to providing clients with niche based applications and tools which deliver real value and immediate benefit."

The SCI VUIT utility has been beta tested at multiple locations and is available for immediate delivery. For addition information on this or other SCI applications, please contact SCI's Software Development Group at (800) 772-7044.

SCI is one of the world's largest independent providers of CPCS and HPTS technical support. Since 1990, the company has been providing professional services and technical solutions to clients in the financial services and healthcare industries.
